1. Abstract

Abstract ## CredWise AI The increasing adoption of digital banking and online financial services has made credit score management an essential part of personal finance. Many users are unaware of the factors affecting their CIBIL score, loan eligibility, repayment behavior, and overall financial health. Traditional banking systems mainly provide static credit reports without intelligent insights or personalized financial guidance. To solve this problem, the proposed project “CredWise AI – Intelligent Credit Score & Financial Health Platform” is developed using React.js to provide a modern, interactive, and user-friendly banking dashboard for credit monitoring and financial analysis. The application allows users to view their simulated credit score, analyze CIBIL report details, monitor score improvement trends, and identify factors influencing their financial credibility. The system includes advanced modules such as credit score visualization, AI-based loan eligibility prediction, repayment tracking, EMI burden analysis, dispute management for incorrect records, financial risk indicators, and personalized suggestions for improving credit scores. Interactive charts and dashboards help users understand their spending behavior, repayment consistency, and credit utilization in a simple and effective manner. The frontend of the application is developed using React.js, along with HTML5, CSS3, JavaScript, React Router, Axios, and Tailwind CSS/Bootstrap for creating responsive and dynamic user interfaces. The backend is built using Node.js and Express.js, while MongoDB/MySQL is used for secure data storage and management. REST APIs are integrated for smooth communication between frontend and backend modules. The proposed system aims to provide a smarter and more intelligent alternative to traditional credit tracking systems by combining banking, analytics, AI concepts, and financial management into a single platform. The project helps users make informed financial decisions, improve their creditworthiness, and understand their financial health more effectively through an advanced fintech-based web application.

2. Module Mapping

(Provide details of how modules are divided among team members.)

Module Name	Assigned Roll Number(s)	Signature
Authentication & Dashboard Module Credit Score & CIBIL Report Module Score Trend & Improvement Tips Module Dispute & Notifications Module Loan Eligibility & History Module Export & Admin Panel Module	2520090157	

3. Module Details

-Authentication Module

Login, Register, OTP, JWT Authentication

-Dashboard Module

Credit score overview and summary

-Credit Score Display Module

Show current score with status

-CIBIL Report Module

Payment history, loans, credit usage

-Score Trend Module

Monthly score tracking with charts

-Dispute Management Module

Raise and track report disputes

-Improvement Tips Module

Suggestions to improve credit score

-Loan Eligibility Module

Loan approval and EMI estimation

-Notifications Module

Alerts for score changes and updates

-History Module

User activity and score history

-Export Report Module

Download reports as PDF

-Admin Panel Module

Manage users, disputes, and reports

Koneru Lakshmaiah Education Foundation
